## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 17-33 (renumbered 1-17) are allowed. The following is an examiner's statement of reasons for allowance:

It is well known in the tire industry to form a bead as a "locked bead" construction in which there is no apex or filler present, as shown for example by Travers (US 3,301,303), Gasowski (US 4,854,361), Hoang (US 5,058,649), and Prakash (US 5,779,829). Additionally, it is well known to wrap a carcass turnup end around a bead core and an elastomeric element and anchor it (carcass turnup end) between the bead core and the carcass, wherein said elastomeric element is arranged adjacent and axially outward of said bead core, as shown for example by Auxerre (US 6,463,975) and Drieux (US 5,971,047). However, the prior art references of record failed to suggest, disclose, or teach a tire construction in which a pair of elastomeric elements are arranged adjacent and axially outward respective bead cores and the bead is in the form of a "locked bead" in which no apex or filler is present. It is emphasized that while the respective features (locked bead and elastomeric element in bead) are individually known in the tire industry, one of ordinary skill in the art at the time of the invention would not have found it obvious to form the specific combination of the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
